alpaka Parallel Programming - Online Tutorial

Lecture 00 – Getting Started with alpaka

Lesson 04: Installation

www.casus.science

How to download alpaka

- Install git for your operating system:
 - Linux: sudo dnf install git (RPM) or sudo apt install git (DEB)
 - macOS: Enter git --version in your terminal, you will be asked if you want to install git
 - Windows: Download the installer from https://git-scm.com/download/win
- Open the terminal (Linux / macOS) or PowerShell (Windows)
- Navigate to a directory of your choice: cd /path/to/some/directory
- Download alpaka: git clone -b release-0.5.0 https://github.com/alpaka-group/alpaka.git

Install alpaka's dependencies

- alpaka only requires Boost and a modern C++ compiler (g++, clang++, Visual C++, ...)
 - Linux:
 - sudo dnf install boost-devel (RPM)
 - sudo apt install libboost-all-dev (DEB)
 - macOS:
 - brew install boost (Using Homebrew, https://brew.sh)
 - sudo port install boost (Using MacPorts, https://macports.org)
 - Windows: vcpkg install boost (Using vcpkg, https://github.com/microsoft/vcpkg)
- Depending on your target platform you may need additional packages
 - NVIDIA GPUs: CUDA Toolkit (https://developer.nvidia.com/cuda-toolkit)
 - AMD GPUs: ROCm / HIP (https://rocmdocs.amd.com/en/latest/index.html)

Preparing alpaka for installation, Part 1

- CMake is the preferred system for building and installing
 - Linux: sudo dnf install cmake (RPM) or sudo apt install cmake (DEB)
 - macOS and Windows: Download the installer from https://cmake.org/download/
- In the terminal / PowerShell, switch to the downloaded alpaka directory: cd /path/to/alpaka
- Create a build directory and switch to it: mkdir build

cd build

Preparing alpaka for installation, Part 2

- In the build directory use CMake for configuration (replace the install prefix with an actual path): cmake -DCMAKE_INSTALL_PREFIX=/some/other/path/ ..
- Your alpaka installation will later reside in /some/other/path/
- If you are content with the default directories you can omit the install prefix
 - This requires administrator privileges!
 - This will result in a system-wide installation!
 - On Linux and macOS the default directory will be /usr/local
 - On Windows the default directory will be C:\Program Files

Install alpaka

- Execute the installation command (note the dot): cmake --install .
- You should now have a complete alpaka installation in the directory you chose earlier
- Did you encounter problems or errors?
 - Check the documentation: https://alpaka.readthedocs.io/en/latest/install/instructions.html
 - Still having problems? Please report them here: https://github.com/alpaka-group/alpaka/issues
